PROJECTS

NBA Player Analytics Platform | GitHub **Jan 2026**

- Developed full-stack NBA analytics platform analyzing 218K+ shots using clustering and statistical modeling techniques. advanced tasks
- Implemented K-Means clustering, interactive shot charts, percentile rankings using Python, Next.js, TypeScript, and SQL.
- Classified 994 players into 12 archetypes, enabling faster insights through responsive real-time analytics dashboard
- Built data processing pipeline to clean, transform, and aggregate large NBA shot datasets for efficient analysis and visualization
- Tech Stack: Python, Pandas, NumPy, Scikit-Learn, SQL, Next.js, TypeScript, Plotly, Matplotlib

MLB Statcast Analytics Dashboard | PowerBi **Dec 2025**

- Designed a scalable Star Schema data model in Power BI with a centralized FactPitch (1 row per pitch) table and custom dimensions (Player, Team, Date, PitchType, Zone32), implementing active/inactive relationships with USERELATIONSHIP for advanced matchup logic.
- Created advanced DAX measures to compute sabermetric KPIs including AVG, xBA, xwOBA, Whiff%, Chase%, Barrel%, EV Allowed, and xwOBA Against, along with dynamic matchup metrics
- Developed interactive dashboards featuring zone heatmaps, spray charts, pitch mix analysis, velocity trends, confrontation tables, leaderboards, and team-level KPIs with drill-through and slicer-driven filtering.
- Tech: Power BI, DAX, Power Query (M), Python, pybaseball, Pandas, Dimensional Modeling

AI-Based Journal Tracker | GitHub **Aug 2025**

- Developed AI-based research management system organizing papers using NLP classification and citation tracking methods.
- Implemented summarization, recommendation engine, and citation integration using Python, NLP, and similarity-based ranking algorithms
- Automated research organization for 100+ papers, improving literature review speed and tracking efficiency significantly
- Designed text preprocessing pipeline using tokenization, TF-IDF, and similarity scoring to improve paper recommendation accuracy
- Tech Stack: Python, NLP, Scikit-Learn, Pandas, NumPy, SQLite, Flask, TF-IDF, Cosine Similarity

TRAINING

Lovely Professional University – PETV51 Summer Training | Certificate **Jun 2025**

- Completed 5-week intensive training in Java, data structures, and object-oriented programming fundamentals with projects. Developed EduPulse analytics system using Java, Swing, JSON, JFreeChart, Maven, applying OOP and data structures.
- Built student attendance analytics dashboard improving data visualization, logic building, and real-world problem-solving skills

Data Structures & Algorithms Practice | iamneo **Jan 2025**

- Completed 25-hour live training covering Python programming, data processing, and introductory machine learning fundamentals.
- Performed hands-on exercises using Python, NumPy, Pandas, and Scikit-learn through guided assignments and projects.
- Built strong Python foundation and gained beginner-level experience in data analysis and machine learning workflows.

SKILLS

- Languages: Python, C/C++, Java, SQL, R
- Frameworks: NumPy, Pandas, Scikit-learn, TensorFlow
- Domain Skills: Data Structures and Algorithms, Machine Learning, Deep Learning, Data Analysis, Data Visualization, Statistical Modeling, Exploratory Data Analysis (EDA)

CERTIFICATES

- Fundamentals of Network Communication , Coursera | Certificate **Sept 2024**
- CODE Foundation , IITM | Certificate **Aug 2024**
- Data Mining with R, Udemy | Certificate **Feb 2024**

EDUCATION

Lovely Professional University Phagwara, Punjab
Bachelor Of Technology , Computer Science & Engineering **2023 - Present**
CGPA : 9.00

Indian Institute of Technology, Madras Tamil Nadu , India
Bachelor in Data Science - Computer Science & Engineering **2023 - Present**
CGPA : 7.59

Arya Gurukul Junior College Mumbai, Maharashtra,
12th - Percentage: 66% **2021 - 2022**

Smt Sulochandevi Sighania School Mumbai, Maharashtra
10th - Percentage: 94.60% **2019 - 2020**
